Vertical Solutions for Hardware Enablement Services

Due to the large volume of sophisticated open source platform software now expected by OEMs, hardware vendors must find new ways to increase design wins and accelerate products to market. One approach hardware companies can take is to develop in an efficient ecosystem of embedded tools, middleware, operating systems, and services.

The Mentor® Embedded Hardware Enablement Program enables hardware vendors to create such an ecosystem.

Vertical Solutions for Hardware Enablement Services offers hardware companies the opportunity to develop a base platform solution for key vertical markets such as in-vehicle infotainment (IVI), retail shopping, or smart energy.

Vertical Solutions for Hardware Enablement Services delivers a range of firmware, OSes, middleware, applications, and unique user interface experiences for hardware companies and their customers that help address specific challenges unique to that market. Among the many solutions offered, Vertical Solutions for Hardware Enablement Services can design and implement visually rich and highly interactive UIs to help existing hardware platforms to differentiate from the competition and achieve faster time to market in the process.

Program Highlights:

- Support for the latest open source technology
  Hardware companies and their customers can take advantage of the latest in open source technology to reduce risk

- Open ecosystem for development
  An ecosystem of embedded tools, middleware, operating systems (including Linux, Android, RTOS), and services readily available

- A comprehensive set of services to support open source tools and platforms
  Services include support for platform development on bare-metal, RTOS, and open source operating systems, GNU toolchains, and embedded UIs

- Expert global assistance
  Mentor’s hardware enablement solutions are supported by a team of experts around the world

Advantages/Benefits:

- Meet the ever-growing demands of OEMs/ODMs
  A full range of expert services and offerings to help ensure timely delivery to OEM customers

- Mitigate risk
  Successful hardware builds via development services, proven technologies, and design

- Increase design wins and accelerate product time to market
  Foster an open and efficient software ecosystem
